

Popup for nearest recipe

MAP

Recipe List

makes a list of recipes
near where the user
clicked and displays
them here.

Recipe card goes here. This includes image(s) of the recipe, ingredients, and any cooking implements required.

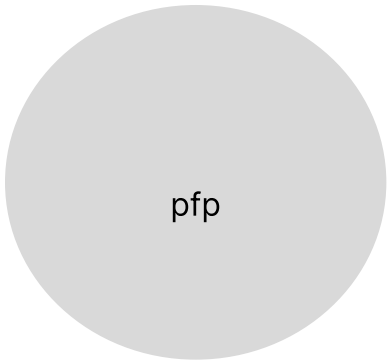

Could implement a fullscreen, mode, anti-screen sleep, auto unit conversion features if we feel like doing more work

Recipe body

this is where the instructions and information about any given recipe will be. This is the part that most people care about.

Not sure what to put here but here are a few ideas:

- intrusive ads
- links to random recipes
- quick links to home page and whatnot
- information about the region the recipe is from
